05-430 PUI

Assignment 9 [Bonus]

Write Up

Everything is uploaded to my GitHub. The PDF tutorial is also uploaded to canvas.

Briefly describe the PUI concept for your tutorial.

I chose to create a tutorial for SVG because it was mentioned briefly in lab but not shown step-by-step. Also, from the presentations on the last day of lab, I noticed not a lot of people used SVG in their webpage.

There are some syntax, rules and options to select that are specific and may not be intuitive at first. Therefore, I wanted to present not only the step-by-step method to creating an SVG from Adobe Illustrator to HTML/CSS, but also to explain certain concepts within SVGs and CSS properties.

Describe the demo(s) that you created for your tutorial.

The animation can be viewed on the index.html in the web browser. In addition, I have created an Adobe Illustrator vector graphic, HTML and CSS that can be edited with for viewers of the tutorial to play around and edit the code.
